

# PAXLOVID – IS IT RIGHT FOR YOUR PATIENT?

ELIGIBILITY FOR  
PAXLOVID DOES NOT  
NECESSARILY MEAN  
CLINICAL BENEFIT

## WHAT PAXLOVID HELPS WITH

Reduced risk of hospitalization for  
high risk people, especially those  
who are not vaccinated against  
COVID-19

## WHAT PAXLOVID DOES NOT HELP WITH

There is NO evidence of positive  
benefits on symptoms and illness  
duration, or on long COVID risk.

## WHAT ARE THE RISKS?

- Side effects are common
- Potential dangerous interactions with some prescribed and over-the-counter medications
- Complete medication / OTC review has never been more important

## WHO MIGHT BENEFIT THE MOST?

- Immunocompromised patients
- Patients who are not fully vaccinated, especially older, and with other health conditions
- Unvaccinated pregnant people
